

17. (Amended)

An information storage medium comprising:

a plurality of units of audio information, each unit of audio information to be reproduced independently of each other;

a plurality of units of aggregate audio information, each unit of aggregate audio information being associated to one or more of said units of audio information;

a plurality of unit attribute information, each unit attribute information indicating attributes of the units of audio information associated to the units of aggregate audio information; and

an aggregate attribute information including a plurality of unit attribute information corresponding to the aggregate audio information.

18. (Amended)

A storage medium according to claim 17, wherein said unit attribute information and said aggregate attribute information are located at different locations of the storage medium.
